THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

ALLOWANCE

Allowable Subject Matter

1. Claims 1-22 allowed.

2. The following is an examiner's statement of reasons for allowance:

None of the Prior Art references of record alone or in combination teach "A liquid crystal display device comprising: a liquid crystal panel comprising a first substrate, a second substrate and a liquid crystal layer, said liquid crystal layer comprising liquid crystal having negative dielectric anisotropy provided between the first and second substrates; and a drive voltage setting section which sets a drive voltage to drive the liquid crystal panel and supplies the set drive voltage to the liquid crystal panel, wherein: the drive voltage setting section sets a drive voltage in accordance with viewing angle characteristics of the liquid crystal panel, thereby controlling viewing angle characteristics, and switches between wide viewing angle characteristics and narrow viewing angle characteristics, wherein the drive voltage is such that the transmission intensity at oblique viewing angle is increased to strengthen excess brightness and grayscale inversion, achieving narrow viewing angle characteristics, and the transmission intensity at oblique viewing angle is decreased to weaken the excess brightness and grayscale inversion, achieving wide viewing angle characteristics, wherein in narrow viewing angle operation, a black voltage at the lower end of grayscale

at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal panel is set to be larger than a black voltage having basic characteristics, in wide viewing angle operation, a white voltage at the higher end of grayscale at oblique viewing angle is set to be a voltage which does not cause grayscale inversion while the black voltage at the lower end of grayscale at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal panel has basic characteristics, and wherein the basic characteristics indicate display characteristics where the transmission intensity at the oblique viewing angle is larger than the transmission intensity at the front when the liquid crystal panel is not subjected to the viewing angle control"; or "An electronic device including a liquid crystal display device, the liquid crystal display device comprising: a liquid crystal panel comprising a first substrate, a second substrate and a liquid crystal layer, said liquid crystal layer comprising liquid crystal having negative dielectric anisotropy provided between the first and second substrates, a drive voltage setting section which sets a drive voltage to drive the liquid crystal panel and supplies the set drive voltage to the liquid crystal panel, wherein: the drive voltage setting section sets a drive voltage in accordance with viewing angle characteristics of the liquid crystal panel, thereby controlling viewing angle characteristics, and switches between wide viewing angle characteristics and narrow viewing angle characteristics, wherein the drive voltage is such that the transmission intensity at oblique viewing angle is increased to strengthen excess brightness and grayscale inversion, achieving narrow viewing angle characteristics, and the transmission intensity at oblique viewing angle is decreased to weaken the excess brightness and grayscale inversion, achieving wide

viewing angle characteristics, wherein in narrow viewing angle operation, a black voltage at the lower end of grayscale at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal pane is set to be larger than a black voltage having basic characteristics, in wide viewing angle operation, a white voltage at the higher end of grayscale at oblique viewing angle is set to be a voltage which does not cause grayscale inversion while the black voltage at the lower end of grayscale at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal panel has basic characteristics, and wherein the basic characteristics indicate display characteristics where the transmission intensity at the oblique viewing angle is larger than the transmission intensity at the front when the liquid crystal panel is not subjected to the viewing angle control"; or "An electronic device capable of performing at least two types of functions among the following functions: electronic messaging, camera shooting, Internet access, and television reception, and including a liquid crystal display device displaying a state of performing the function during performance of each of the functions, the liquid crystal display device comprising: a liquid crystal panel comprising a first substrate, a second substrate and a liquid crystal layer, said liquid crystal layer comprising liquid crystal having negative dielectric anisotropy provided between the first and second substrates, a drive voltage setting section which sets a drive voltage to drive the liquid crystal panel and supplies the set drive voltage to the liquid crystal panel, wherein: the drive voltage setting section sets a drive voltage corresponding to the function to be performed, thereby controlling viewing angle characteristics, and switches between wide viewing angle characteristics and narrow viewing angle

characteristics, wherein the drive voltage is such that the transmission intensity at oblique viewing angle is increased to strengthen excess brightness and grayscale inversion, achieving narrow viewing angle characteristics, and the transmission intensity at oblique viewing angle is decreased to weaken the excess brightness and grayscale inversion, achieving wide viewing angle characteristics, wherein in narrow viewing angle operation, a black voltage at the lower end of grayscale at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal pane is set to be larger than a black voltage having basic characteristics, in wide viewing angle operation, a white voltage at the higher end of grayscale at oblique viewing angle is set to be a voltage which does not cause grayscale inversion while the black voltage at the lower end of grayscale at oblique viewing angle which is a drive voltage to be supplied to the liquid crystal panel has basic characteristics, and wherein the basic characteristics indicate display characteristics where the transmission intensity at the oblique viewing angle is larger than the transmission intensity at the front when the liquid crystal panel is not subjected to the viewing angle control."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
